

# Caromee FlexRay-Monitoring

## Features

Caromee provides all the basic functions needed for measuring and analyzing CAN and FlexRay networks on a PC. Caromee is an open measurement framework that can be extended through a large number of interfaces. With its plug-in concept, Caromee can be extended dynamically by adding measuring equipment interfaces. Caromee requires FlexCard USB or FlexCard SE II hardware interface.

- PC tool for analyzing vehicle networks
- Online and offline data evaluation
- Data acquisition from different vehicle busses
- Acquisition of large volumes of data
- Easy overview of large volumes of data through log presentation
- Base framework for enhanced evaluations and special applications
- Error analysis in intensive network tests
- Additional read and write formats can be developed via an interface
- COM interface for external control

## Order Information

Order Number	Caromee	FlexCard-USB	FlexCard-SE-CAN
--------------	---------	--------------	-----------------
